

SUDHAKAR S

SOFTWARE ENGINEER

+91 9345718569

sudhakarshanmugasundar@gmail.com

TECHNICAL SKILLS

- Java Programming
- Programming Web
- Development MySQL,
- Github

SOFT SKILLS

- Time Management
- Teamwork
- Problem Solving
- Critical Thinking
- Communication

CERTIFICATION

- Infosys Achievements
 - Java Programming
 - Python Programming
 - Internet of Things
 - Generative AI Fluency

LANGUAGE

- English
- Tamil

EDUCATION

B.E,Computer and Communication Engineering

V.S.B Engineering College,Karur

CGPA: 7.27

High School

PonnuMatriculation Higher Secondary School,
Dharapuram

12th Score: 78%

PROFILE

Motivated and focused Software Engineer with strong fundamentals in programming and real-time project experience. Completed a Microsoft virtual internship with exposure to AI tools. A team player and problem solver, also recognized at the state level in boxing.

INTERNSHIP

MICROSOFT (via Edunet Foundation)

- Completed certified training on Artificial Intelligence fundamentals.
- Hands-on experience with AI tools and real-time problem-solving.
- Gained practical understanding of machine learning models and deployment techniques.

PROJECTS

Decentralized finance (DeFi)

Technology Used: Java, MySQL

- DeFi | HTML, CSS, JS, SOLIDITY (Ongoing))
- Decentralized Finance (DeFi) is a blockchain-based financial system that eliminates intermediaries like banks by using smart contracts to manage transactions securely and transparently.

Smart Waste Management and Recycling System

Technology Used: HTML, CSS, JavaScript, MySQL, Firebase

- Smart Waste Management and Recycling System is a digital platform that enables efficient waste segregation, exchange, and recycling using a mobile application and cloud-based technologies.
- It connects users with waste management organizations, improves recycling efficiency, reduces environmental pollution, and promotes a sustainable circular economy

PUBLICATION

Lightweight Blockchain Framework for Secure and Privacy-Preserving IoT Systems,

- Designed a lightweight blockchain framework for secure IoT systems, reducing latency and communication overhead by 35%.
- Implemented Proof-of-Authentication (PoAh) consensus, Trust & Reputation Management, and ECC + Zero-Knowledge Proofs for privacy-preserving authentication.
- Improved energy efficiency by 18% using edge-assisted blockchain processing and hybrid on-chain/off-chain storage with IPFS.
